

Offset Printing Products

BMP has become a leader in innovative high performance consumables for automatic blanket cleaning systems. BMP's Everclean® technology is a unique offset printing blanket cleaner manufactured with a Patented Microfibre Textile which is a highly effective and environmentally friendly (no VOC's).

BMP Everclean® products have been engineered to meet the specific requirements of various automatic blanket and back cylinder cleaning applications. Our high-quality and advanced technology provides excellent performance and reliable cleaning solutions for all Conventional, UV/HUV and EB applications.

Automatic Blanket Cleaners (ABC)

BMP Everclean® ABC rolls outperform competitive products due to the patented microfibre technology. BMP's ABC's are designed to clean the blanket with less fluid, requiring fewer wash cycles, which translates into reduced customer operating costs and reduced press downtime.

Everclean® Advantages

- Increased Strength
- Decreased Stretch
- Shed / Lint Free
- Reduced Cleaning Time
- Reduced Material Usage
- Reduced Cleaning Waste
- Low VOC chemistry
- Non Toxic or Hazardous

BMP ABC Rolls Are Available For:

- Web or Sheet-fed Presses
- UV/HUV/EB & Conventional Inks
- Dry or Presoaked Mini Rolls
- 500 Meter Rolls
- Blankets & Back Cylinders

Wash Up Blades

BMP carries a wide assortment of ink wash up blades for offset printing presses in-stock. Our wash up blades are manufactured to strict OEM tolerances and are offered in rubber-metal, plastic, and poly-urethane. Our wash up blades are designed to be long lasting and chemical resistant.

Our customers expect the highest performance and we have a high quality blade that fits your application. BMP has developed a range of replacement wash-up blades which provide excellent performance under all conditions. Strong chemical resistance to today's aggressive inks and solvents, our blades have proven their high quality both to the original equipment manufacturer and to the end users.

Fountain Solution Filters

BMP Fountain Solution Filters provide advanced cleaning of fountain solution in your fountain recirculating systems. These filters remove all contaminants and extend the replenishment cycle of fountain solution. BMP filters will remove impurities that cause scumming, premature plate wear, tinting, hickeys and roller glaze.

In addition, to considerably reducing fountain system maintenance. BMP filters meet or exceed OEM requirements and are precision-designed for exact fit and optimal performance. Fountain Solution is maintained at the same level of cleanliness as fresh solution, resulting in less residue in the trays, recirculator sump, and on the dampening rollers.
